## STRYKER POWER-PRO XT

Stryker's industry-leading powered ambulance cot answers the need for emergency transport that dramatically reduces strenuous lifting and the associated risk of back injury. Power-PRO features Stryker's innovative powered hydraulic lift to raise and lower patients with the touch of a button. The Power-PRO's groundbreaking design features set the standard for superior performance and outstanding ergonomics.

### FEATURES

#### **Adjustable Load Height with Jog Function**

Stryker's advanced adjustable load height with jog function allows the operator to preset the height of the load wheels to meet the ambulance deck to 36-inches. The jog function assists operators when loading on an incline by jogging past the preset load height.

#### **Hydraulic Lift System**

Stryker's high-speed hydraulic lift raises and lowers the patient with the touch of a button and fully retracts in 2.4 seconds, reducing load and unload times. The DEWALT industrial grade battery system with manual back-up ensures operator confidence and powers the cot through 20 complete call cycles\*.

#### **Manual Back-up System**

The Power-PRO's hydraulic lift has a fully functional manual back-up system that provides complete cot operation in the event of power loss. When the manual release handles are engaged, the cot will not drop until the weight has been lifted off the wheels by both operators, preventing accidental patient drop.

#### **Built-In Pull Handles**

Stryker's integrated pull handles at the foot end offer maximum operator control and support during transport. When loading, the handles fold down and clip conveniently out of the way.

#### **Retractable Head Section**

Stryker's innovative retractable head section telescopes in, giving the operator complete 360-degree mobility in any height position. This feature assists operators in and out of confined spaces while maintaining a push/pull bar to maximize operator control.

## **Pneumatic Backrest**

Stryker's advanced one-hand pneumatic backrest is a RUGGED innovation that ensures superior operator control and significantly reduces manual lifting. The Power-PRO's standard one-hand release assists the operator with lifting the back of a patient to any position which also delivers maximum patient comfort.

## **Fold Down Side Rails**

Stryker's fold down side rails are a RUGGED innovation that require no additional lateral space, providing full operation in confined spaces for user-convenience. Their low-force operation offers security in the up position and unimpeded access to the litter in the down position.

## **Lift Capable Safety Bar**

The Power-PRO's lift capable safety bar delivers handling confidence through smart design and rock solid construction. Dual lift points readily support a full load and accommodate operators of all heights.

## **Head and Foot End Lift and Grip Section**

The Power-PRO's head and foot end lift and grip section offers unmatched ergonomics. Lifting handles optimize to 30-degrees, EMS operators' most preferred position.

## **Floor Mounted Safety Hook**

Stryker's distinctive floor mounted safety hook design significantly reduces the risk of cot drop incidents and potential operator or patient injury during the loading and unloading process.

## **Oversized Wheels**

Stryker's heavy-duty, oversized wheels require less roll force, providing safe, secure transport in any emergency situation. Reduced roll force provides exceptional operational ease and minimizes the risk of back injuries

## **Foot End Controls**

Stryker's foot end controls promote proper ergonomics through convenient placement on both the upper and lower lift bars accommodating operators of various heights.

## **Patented X-Frame Construction**

Stryker's patented x-frame design defines proven performance and maximizes efficient operation for enhanced provider safety and patient comfort as well as dampened action during hot drops.
